

Friday 18h: MC 86 F

- Retrosternal chest pain
- No cardiac History
- Main carer for husband
- HTN / DM (diet)
- LAD syndrome on ECG
- Troponin 3864
- Frail
- Episode of AF on admission
- On table echo mild AS / LV OK

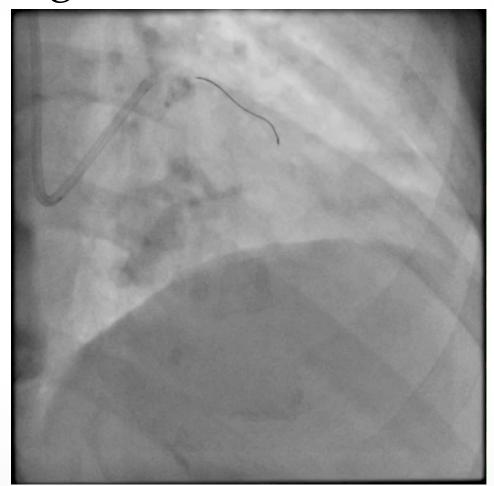

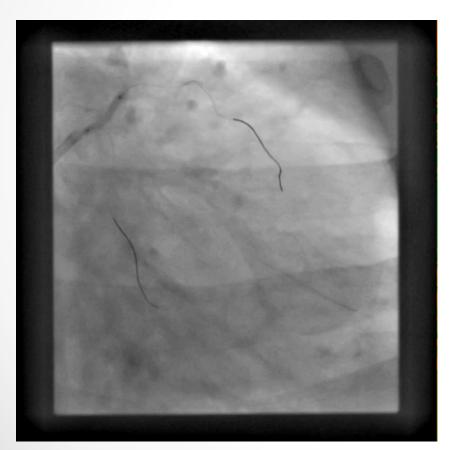

Strategy? – PCI? / Do something to the RCA? / Rotablate? / Call a friend....?

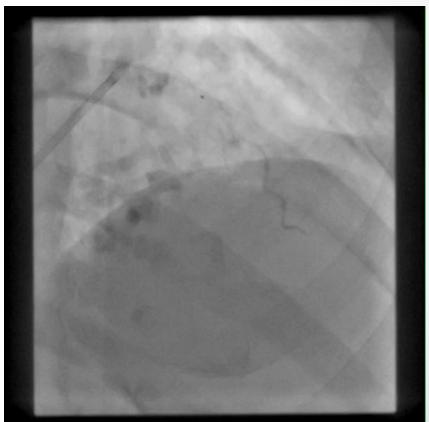

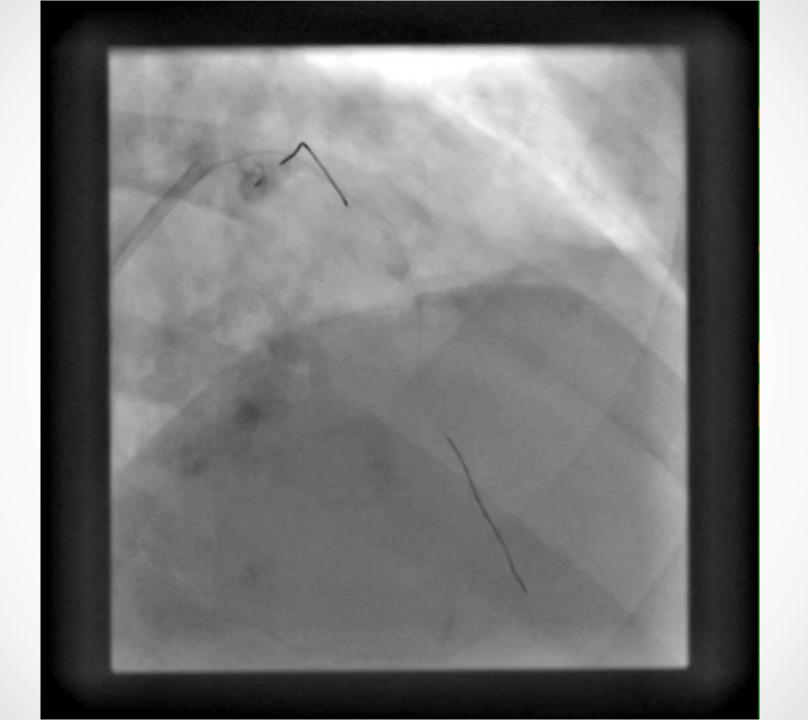

Strategy? – PCI LMS /Rotablate / Call a friend / 7F guide

Mid LAD dissection, wire Cx – She is unhappy, try to avoid rotablation....

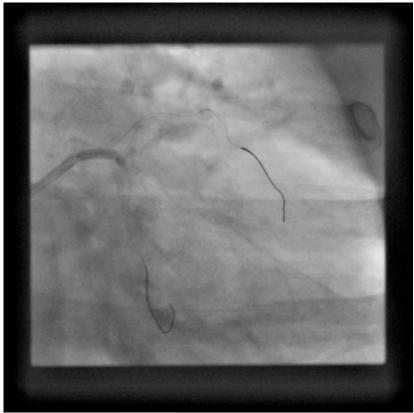

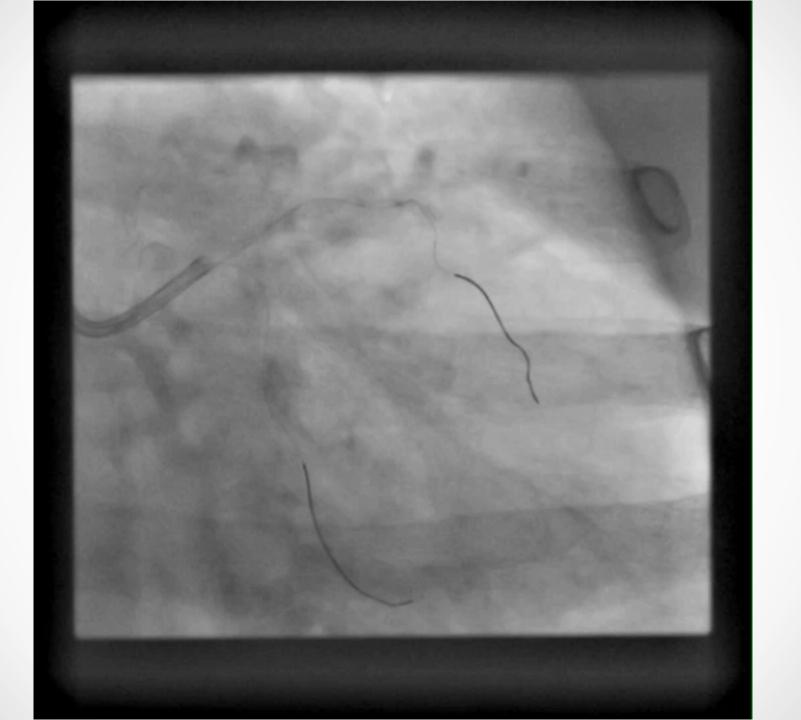

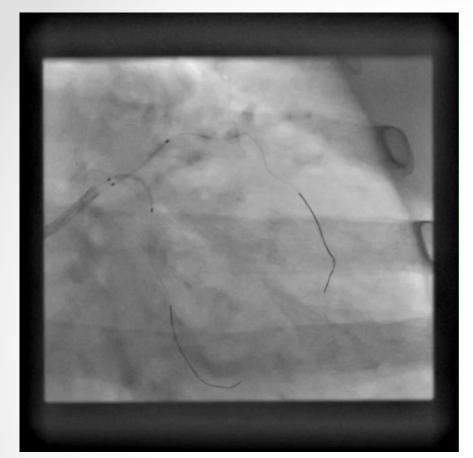

Plan B + Strategy

- Serial dilatation: Make plenty of space
- Shotgun as safe and quick as possible

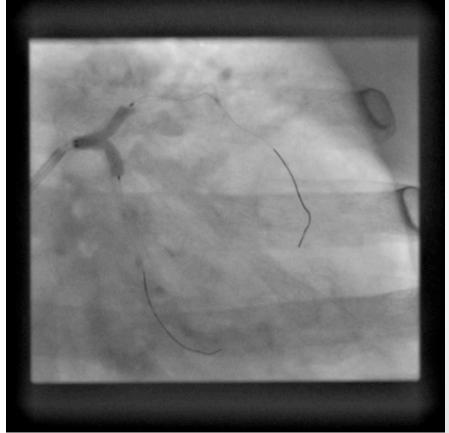

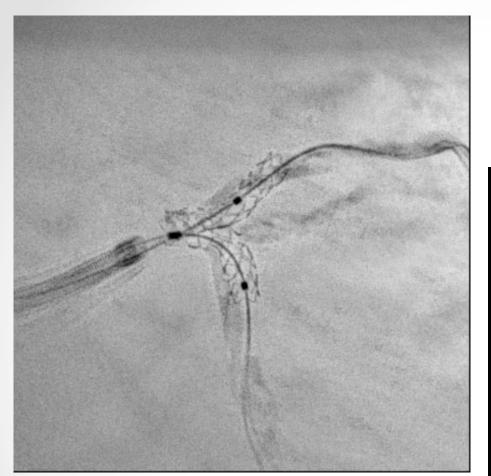

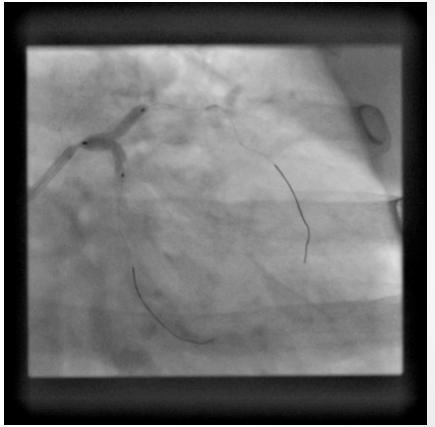

Biofreedom 2.75 x 15mm –LAD Biofreedom 3 x 15mm - LCx

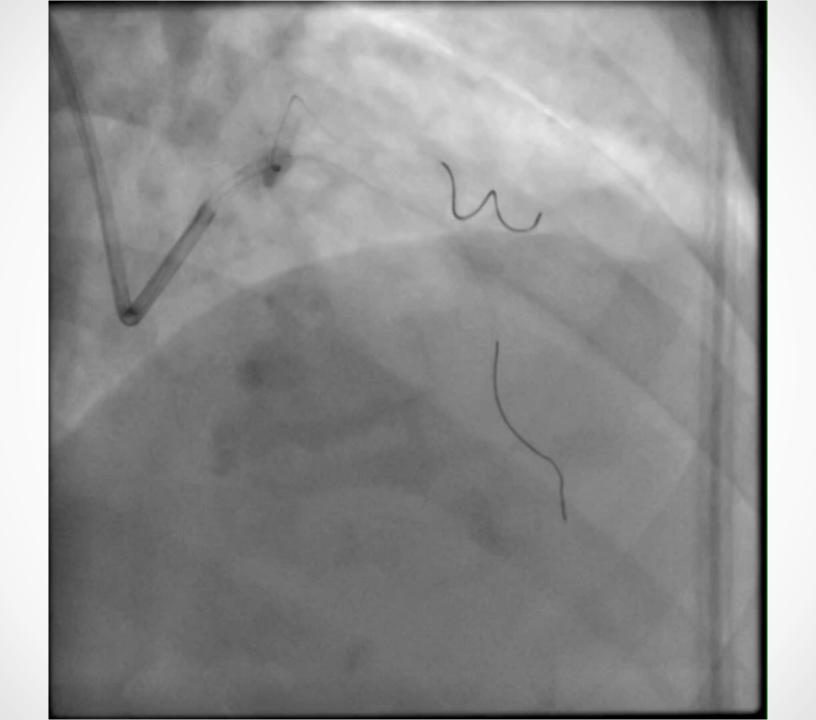

18 Ats 18 secs

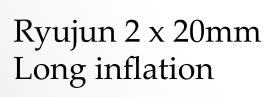

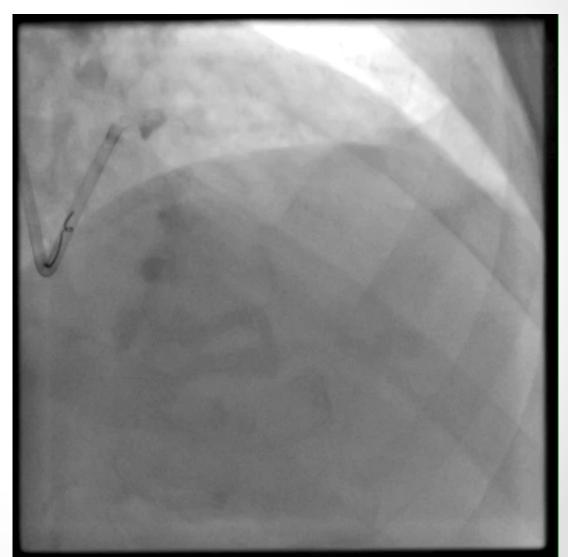

2.75 X 8 / 3.25 X 12 NC – 20 ATS

Dissected LAD

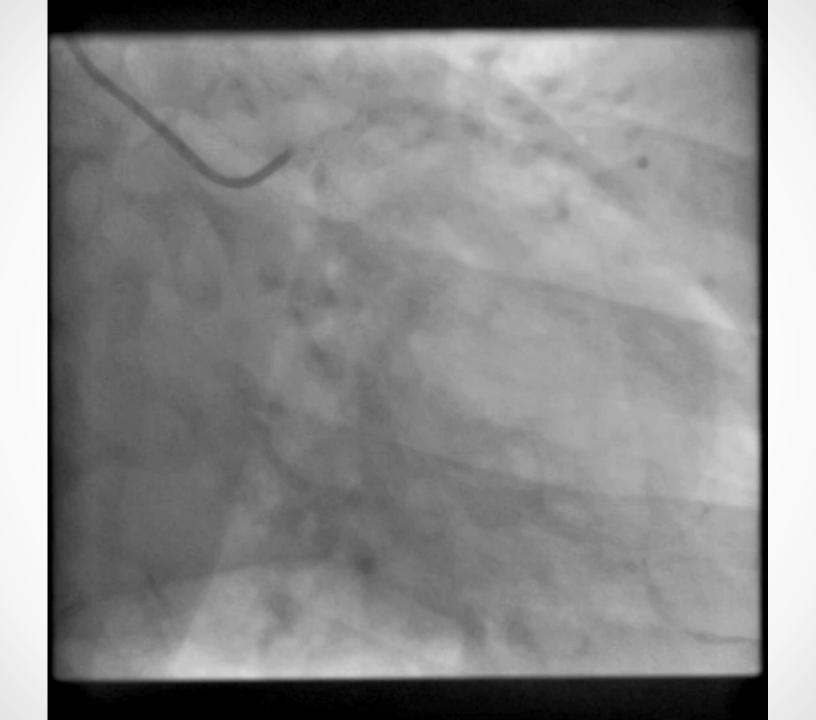

The end?!

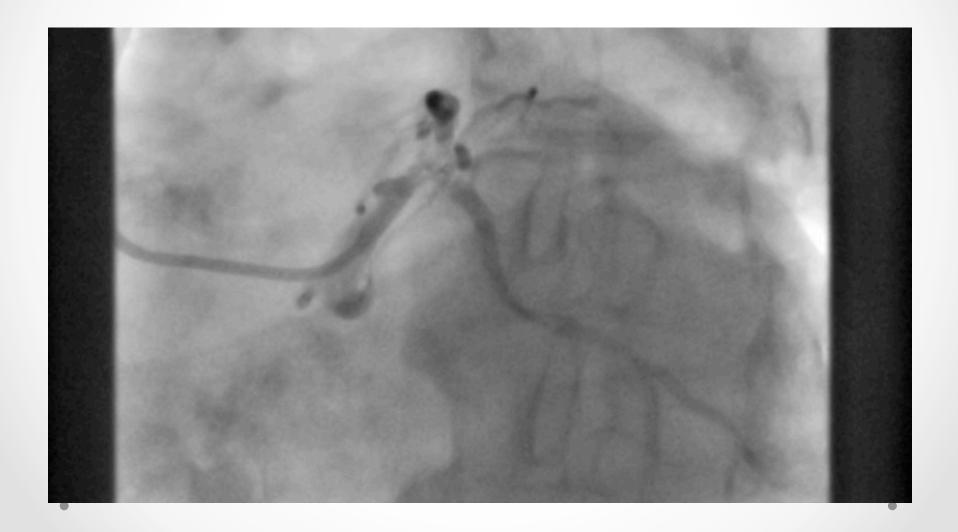

- Still lots of pain
- ECG fine
- Stays over weekend

5 months later...

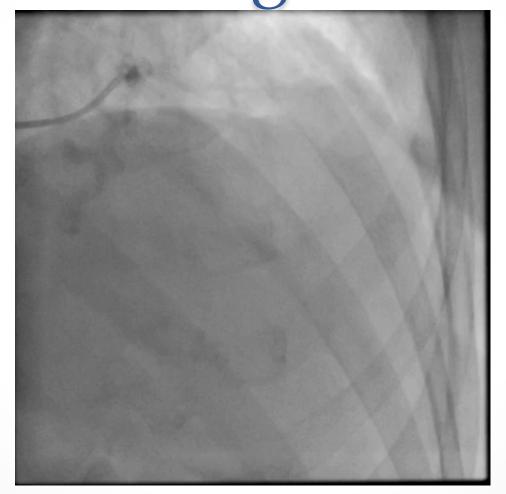

- Few hours of chest pain
- Not as bad as last time
- New LBBB
- Troponin 654 1558
- Not taken as PPCI on thursdsay night
- (Settled with GTN)
- Back on my Friday list...

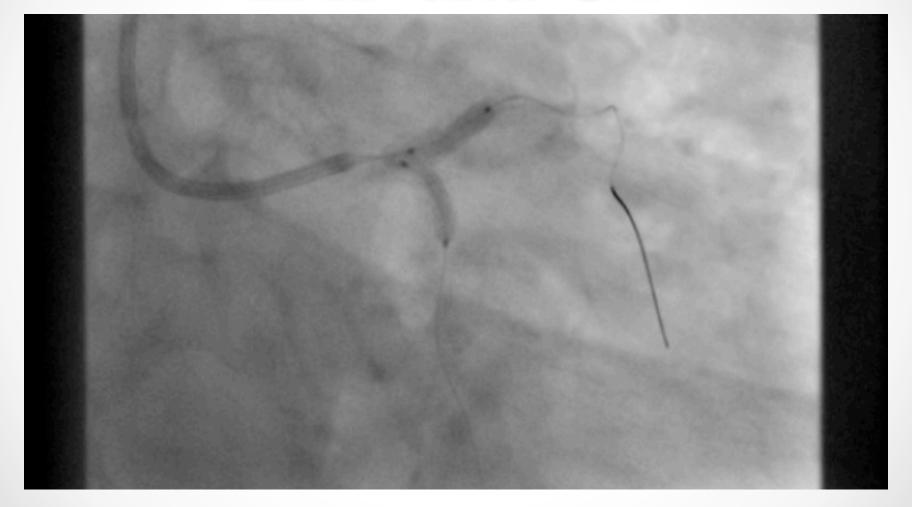

Oh No – that's why I never Shotgun!

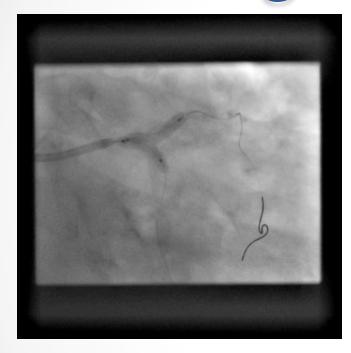

LAD healed up Ok though...

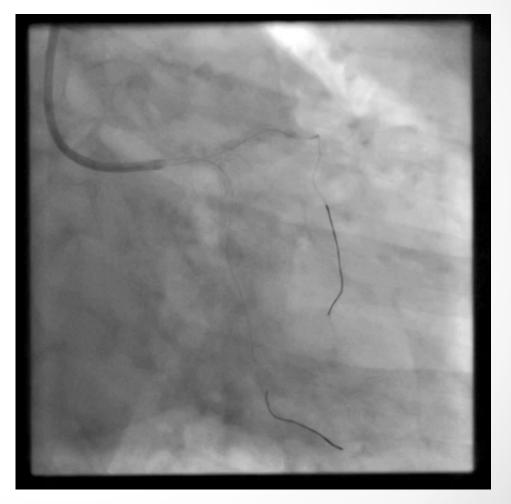

Guidewires sailed into LAD and Cx!

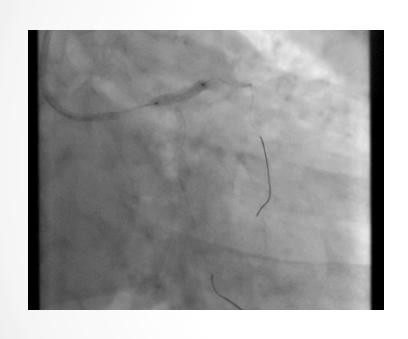

Kissing to 3.25 & 3.0 NC

DCB to LAD 10 ats -20 secs

CARDIAC ARREST

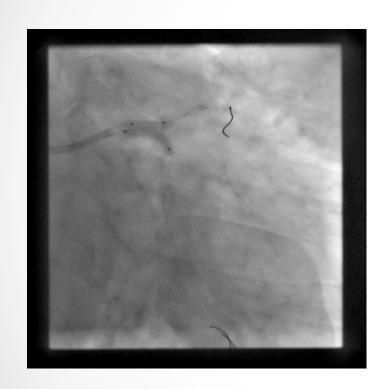

ASYSTOLE – 1 MIN CPR

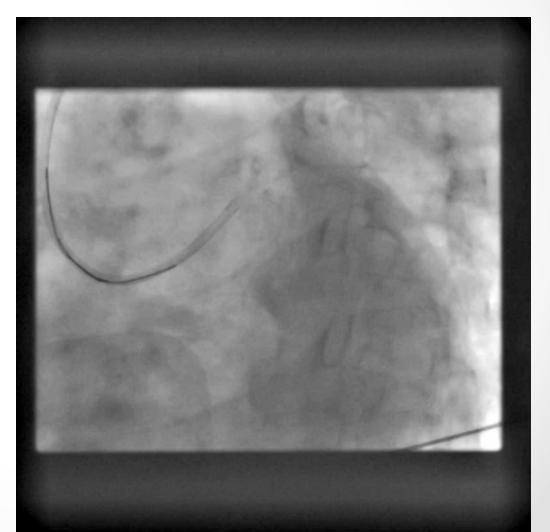

? CIRC OCCLUSION

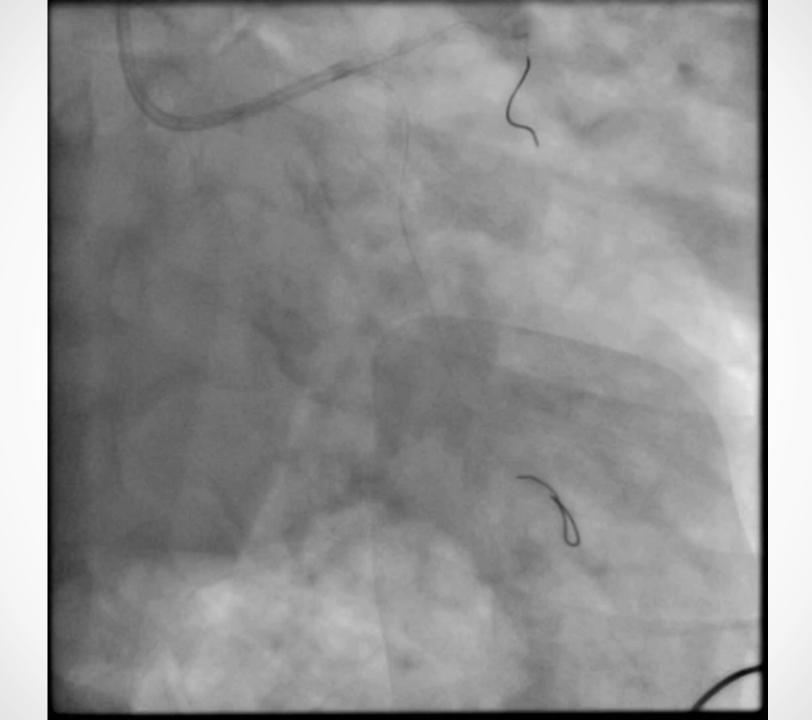

LOOKS FINE

RPEEAT KISS

DCB to LCX with NC balloon in LAD

Clinic 2 months later...

- Well climbing stairs
- Caring for husband
- Aspirin and Clopidogrel changed to Rivaroxaban and Clopidogrel
-Alls well that ends well

11 months later...

- Chest pain
- Minor Troponin rise
- Thursday list
- •
- She doesn't fancy it again thank you.
- And nor do I.
