# IVUS GUIDED LAD CTO/LM BIFURCATION STENTING

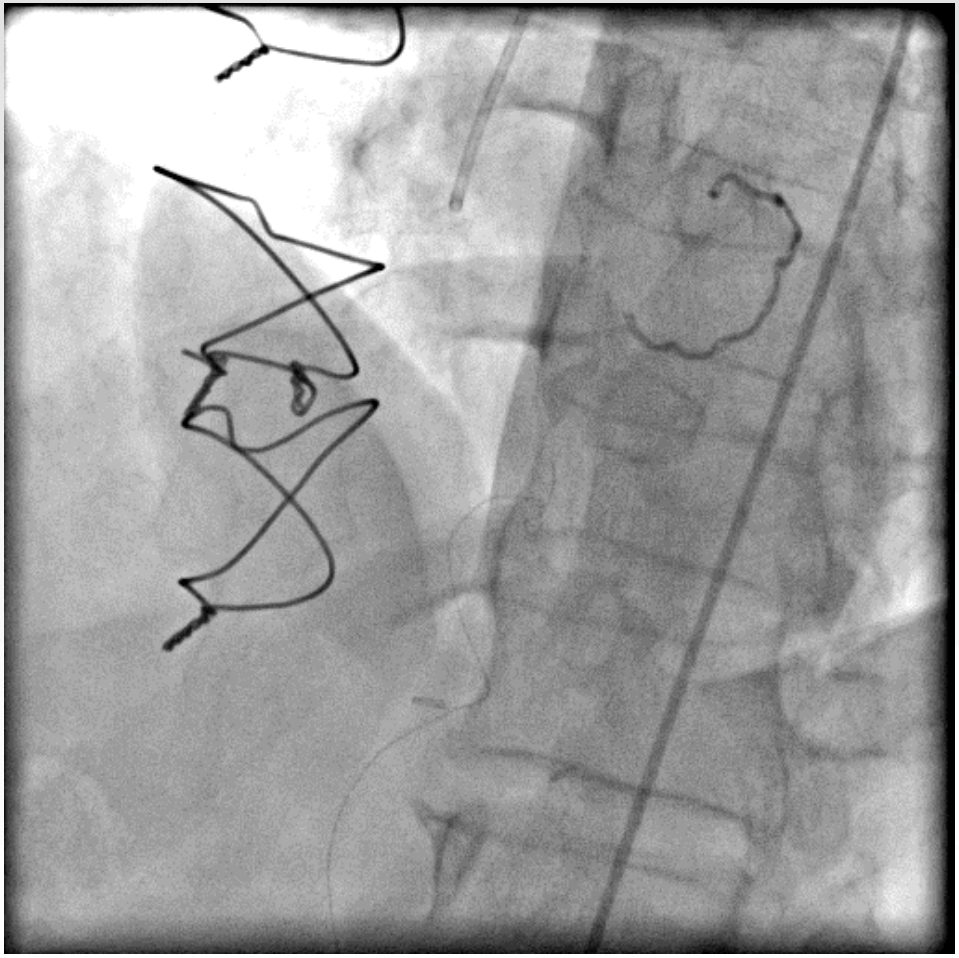
DR JOBY K THOMAS MD,DM

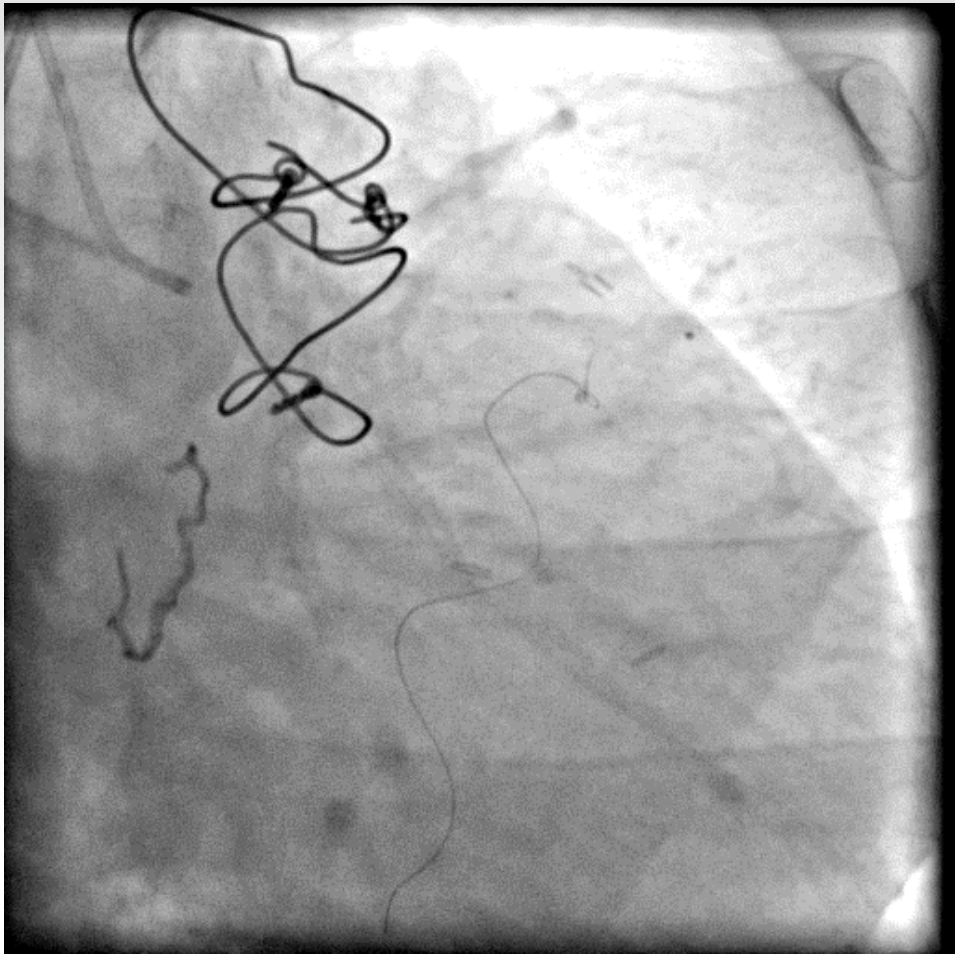
CARITAS HOSPITAL

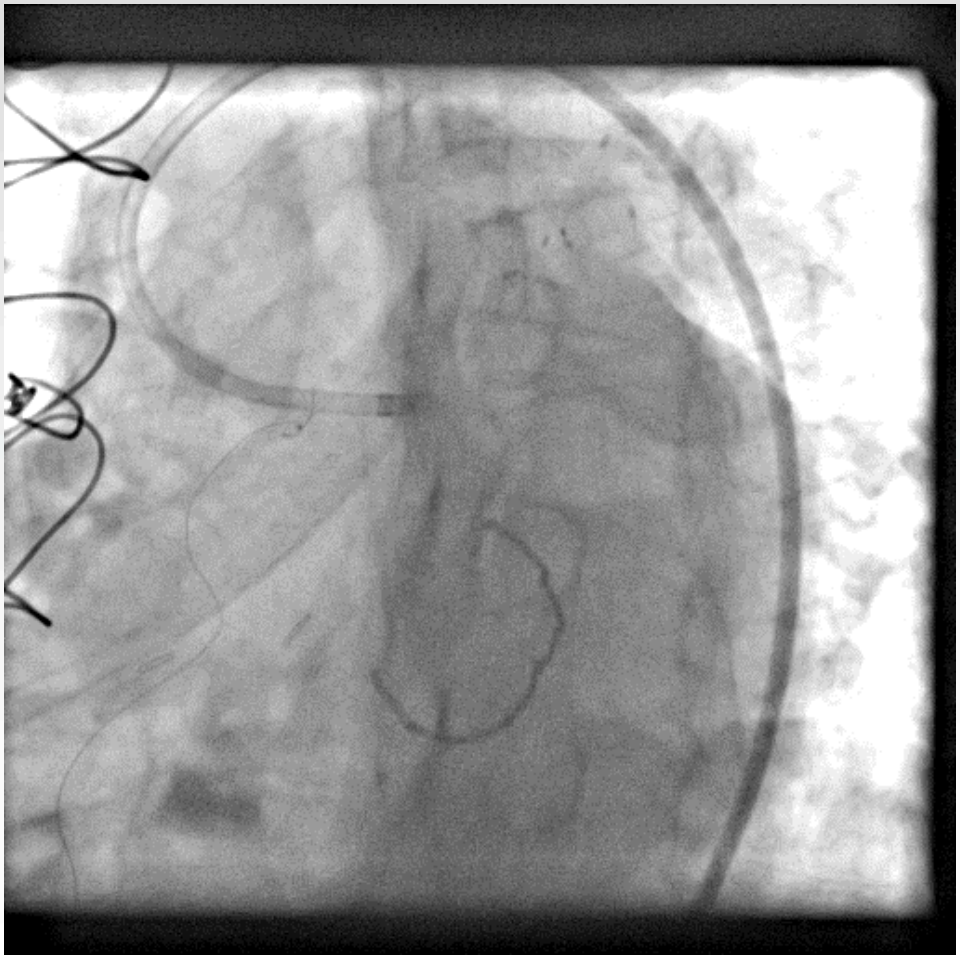
KERALA, INDIA

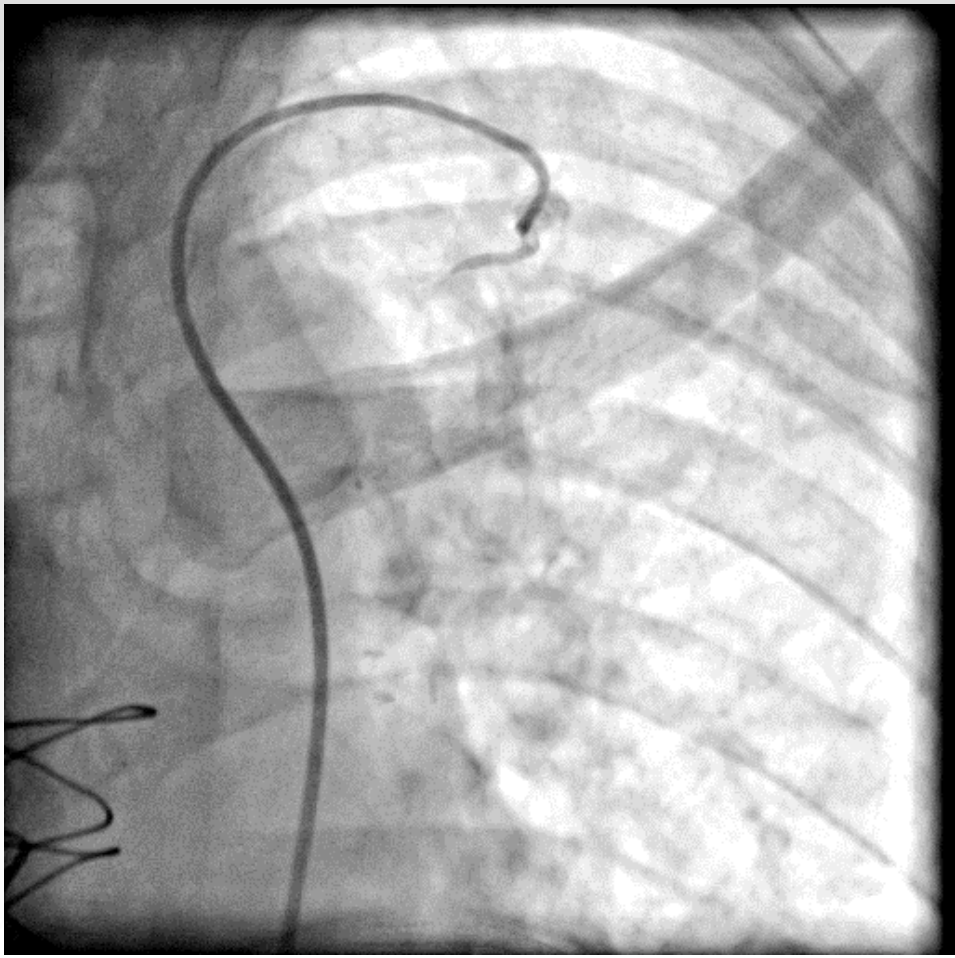
- Patient underwent CABG and mitral valve repair in 2014 at a different hospital
- Had effort angina which revealed occluded LIMA and both SVGs(2017)
- They attempted PTCA , did RCA and ‘ramus ‘ stenting
- LAD was ostial CTO , which they could not succeed in doing

- Patient still has angina
- Check angio showed patent stents in RCA and ‘ramus’
- That converted a 0,1,1 LM distal bifurcation to 0,1,0
- But LAD ostial CTO with no stump









- We presumed that the LAD ostium could be opposite the atrial circumflex
- But thought we would be wiser with imaging
